Python Django Training and Certification

Certification Project

edureka!

Q1: Design a Blog Administration System as follows-

The Blog must allow the user to host articles and allow comments from readers

The Index page of the blog must contain a list of all articles, the dates on which the articles were published and hyperlinks to them

Every article has a dedicated webpage which consists of the title, author, publication date, a comments section and a form for readers to submit comments

Readers must be able to enter comments and view their submitted comments instantly

All articles must contain a title, an excerpt, author, body and a publication date

All comments must contain the name of the commenter and the comment text

Q2: Create a REST API that fetches all comments, the author of the comments and the article on which the comment is made
